

I would not be proud to say I work for WDNR with this glaring report.

What PCPOA believes about these figures **IS!!!** not the 34% of the total pollution and not the 1,136.70 pounds of mercury being released on the shores of the Wisconsin River but we believe this is indicative of the WDNR mind set about polluting Petenwell - Castle Rock, e.g. nobody cares about the mighty Wisconsin.

Vulcan Materials Co., the largest source of mercury in the state, is a chlorine plant which uses mercury to produce chlorine for the paper industry. They are not good neighbors nor have they ever been good environmental neighbors.

The PCPOA fully expects the WDNR to start acting on these issues. People have been waiting over 50 years for something to happen on these man-made lakes, which have been polluted by the Paper Mills and the food industry. Our association has been and will be the moving force on these two lakes.

The PCPOA is going to do all it can to ensure that the public can use the lands and waters of the Federal Project 1984 known as Petenwell Castle Rock. It's now time for WDNR and industry to pay their fair share.

We look forward to your response and action.

Frank J. Luedtke
President
